YOMAL WANNIGAMA

RÉSUMÉ / CV

LinkedIn

PERSONAL

08/05/2004

Driver Licence P2

SKILLS

- SPSS Statistics
- AGILE project management
- Market Analysis, Research & Strategy
- Consumer Behaviour
- Adobe Suite
- JavaScript
- Node.js
- HTML & CSS
- Figma
- Interviewing
- Customer service

High School Leadership Team

School Prefect 2021 - 2022

- Swimming Carnival organiser
- Athletics Carnival organiser
- Lismore flood appeal fundraiser
- Mitchell Youth Leadership forum
- Youth Leadership Academy Australia conference
- MC - ANZAC day service ceremony
- Weekly MC at morning assemblies
- Innovation, Teamwork, Honesty, Delegation, Self-discipline, Accountability, Resilience, Integrity in leadership

Duke of Edinburgh

Bronze level 2018 - 2020

- Resilience
- Community work (Library assistant)
- Physical ability on camps
- Survival/Use of resources

EDUCATION

University of Sydney

Bachelor of Interaction Design / Advanced Studies (Marketing major) 2023 - present

Bachelor's degree focusing on UX/UI Design and Development with a complementary major in Marketing. Combines expertise in designing intuitive digital experiences with strategic marketing insights. Emphasizes user-centered design, coding skills, and innovative approaches to engage and retain audiences.

WORK EXPERIENCE

EBOSS Healthcare UX/UI Design & Marketing Internship

UX/UI & Marketing 2025

- Redesigned healthcare web interfaces
- Created Figma UI mockups
- Updated product image assets
- Designed digital marketing banners
- Supported website content updates
- Collaborated with internal teams

Vodafone Sales Representative

Sales experience 2025 - present

- Ranked #1 for EOFY sales
- Contract Processing
- Credit Checks
- Sales Negotiation
- System Navigation
- Online banking
- Strong Communication

Kmart Retail Assistant

Retail experience 2023 - 2024

- Stock Management
- Customer Service
- Product Knowledge
- Strong Communication
- Task delegation between break out teams

Event Official - Supercars SYD

Sydney SuperNight Offcial 2024

- Volunteer Work
- Safety Management
- Conflict Resolution
- Knowledge of regulation - strong revision/memory
- Team coordination - security, medical staff, volunteers

Landcom Online Teenager Workshop

Park design consultation 2021

- Open Board Idea Listing
- Open Spaces
- Facilities
- Importance Of Human Wellbeing
- Improved Shelter
- Interactive Entertainment

AIE Work Experience

Certificate of Merit 2020

- Programming (C#)
- 3D Modelling
- Animating
- Rigging
- Teamwork
- Design Process
- Demographic Research
- UI/UX

SAS Special Olympics Volunteer

SAS Volunteer 2019

- Ushering
- Distributing raffle tickets
- Helping set up auction
- Packaging

SAS Youth Data Day Champion

SAS Youth Data Day 2016

- I was chosen to speak at SAS's 2016 annual conference about how I programmed a sphero ball to move. Additionally, I described the process of creating a Star Wars game with basic JavaScript.

HIGHLIGHTED PROJECTS

Project files can be found here - (LinkedIn)

Indoor Environmental Quality - Interaction Design Web Development

Associated with University of Sydney — Feb 2025 - Nov 2025

- Designed and developed an interactive IEQ Dashboard for facility managers
- Visualized CO_2 and noise data using Plotly.js for trend and outlier detection
- Processed and cleaned large sensor datasets from the SAMBA network (2019)
- Built dynamic line and bar charts to compare floors, zones, and time periods
- Integrated actionable insights and threshold indicators to guide decisions
- Applied usability testing (Think-Aloud, 15 participants) to refine interface clarity
- Enhanced accessibility through ARIA labels, tooltips, and responsive layout
- Grounded design insights in WELL and NIOSH building comfort standards
- Implemented data preprocessing in Excel and JavaScript for web deployment
- Collaborated with AI tools (ChatGPT) to improve code structure and UX logic

Is the Circular Economy merely circular logic in the Australian market - Consumer Behaviour

Associated with University of Sydney — Aug 2024 - Oct 2024

- Collaborated with four teammates to assess the implementation of the circular economy (CE) in the Australian market as part of my Consumer Behaviour class.
- Conducted case studies on IKEA and Unilever to examine how consumer behavior theories drive sustainable business practices.
- Explored theories such as Symbolic Self-Completion Theory, Theory of Planned Behavior (TPB), and Types of Needs and Motivations (utilitarian and hedonic).
- Developed recommendations for Zara to improve its sustainability efforts using social media campaigns and QR code-linked reward systems.
- Proposed leveraging influencer partnerships and aligning with consumers' utilitarian and hedonic motivations to enhance engagement with circular economy initiatives.
- Used Agile methodologies to manage team dynamics and ensure smooth project execution.
- Divided the team into three squads, with each group responsible for specific tasks during sprints.
- Held weekly scrums to track progress and maintain alignment.
- Managed schedules during a busy mid-semester exam period using a shared Google calendar.
- Identified a need to use Atlassian software for real-time task tracking and reducing confusion.
- Focused on wellness by ensuring balanced workloads and providing support during high-stress periods.
- Enhanced collaboration and efficiency through a supportive team environment.

Broadcasted Olympics TV Augmented Viewing Experience with Companion Mobile App for Kids - UX/UI design (Figma)

Associated with University of Sydney

Aug 2024 - Oct 2024

- Collaborated with two peers to tackle the challenge of engaging young viewers with lesser-known Olympic sports.
- Designed and developed an interactive solution to make these sports more accessible, engaging, and educational for children.
- Created a final product featuring animated athletes who simplified complex rules and posed interactive questions to involve young audiences.
- Incorporated gamified features, such as leaderboards, to motivate children to explore the Olympics in a fun and competitive way.
- Grounded the process in collaboration and user-centered design principles, supported by extensive research and iterative development.
- Conducted online ethnography, interviews, and surveys to understand young viewers' preferences and behaviors.
- Used brainstorming tools like sketching, storyboarding, and user journey mapping to visualize potential solutions.
- Incorporated feedback loops to refine ideas and ensure the solution effectively addressed the problem.
- Developed a high-fidelity prototype in Figma, using its interactive features to simulate real-world user interactions.
- Integrated animated overlays, real-time feedback, and engaging questions into the prototype.
- Conducted iterative testing to validate and improve the solution, ensuring it simplified complex sports concepts and enhanced engagement.
- Demonstrated how interactive tools can transform passive sports viewing into an engaging learning experience.
- Blended education with play to help young viewers connect with the Olympic Games' values of perseverance, sportsmanship, and inspiration.
- Fostered a deeper appreciation for a wide range of sports through this collaborative effort.

Figma (Software) **Iterative Design** **Interviewing** **Survey Design** **User Journey Mapping**

Slot Machine Gambling Behaviour - Qualitative Research In Design

Associated with University of Sydney

Aug 2024 - Oct 2024

- Collaborated with teammate Isaac on an in-depth research project exploring psychological, social, and environmental factors influencing slot-machine gambling behavior.
- Aimed to uncover actionable insights into the motivations and experiences of individuals engaging in gambling to inform responsible gaming policies and interventions.
- Investigated how demographic factors, emotional experiences, and social dynamics shape gambling behaviors.
- Used qualitative methods, including field notes, design probes (Gambling Photo Story, Mood Diary, Slot Machine Influence Map), and in-depth interviews, to capture the multifaceted experiences of gamblers.
- Key findings highlighted that gambling functions as a social bonding activity, provides emotional relief through routine, engages players in emotional highs and lows, and fosters loyalty through familiar, inviting environments.
- Conducted a thematic analysis, collaboratively organized in Figma, using a systematic coding approach to ensure the quality and credibility of findings.

Participant Observation **Interviewing** **Qualitative Research**

Muscle Mission Application - JavaScript (Frontend + Backend / Full Stack)

Associated with University of Sydney — Apr 2024 - May 2024

- Developed Muscle Mission, a user-friendly single-page application (SPA) for fitness enthusiasts to manage and track their workout routines efficiently.
- Built the application using HTML, CSS, and JavaScript, with localStorage for client-side data persistence and a Node.js server with in-memory storage for workout data handling.
- Designed the app to be fully responsive, providing a seamless experience across desktop and mobile devices.
- Integrated a workout timer with start, stop, and reset options to monitor session duration.
- Implemented a star-based workout rating system to evaluate and improve routines.
- Enabled exercise management features, allowing users to add, edit, or remove exercises with support for multiple sets, weights, and repetitions.
- Created a dynamically rendered exercise list for real-time customization of workout plans.
- Designed a detailed workout history feature displaying titles, times, average weights, dates, ratings, and exercises performed.
- Ensured data persistence using localStorage, allowing users to retain information after browser refreshes or closures.
- Developed a Node.js server to manage API requests for workout data, ensuring robust and scalable input handling.
- Focused on enhancing the fitness tracking experience with intuitive features and seamless usability across devices.

JavaScript **Node.js** **Version Control** **GitHub** **HTML** **CSS**

'WELCOME TO ROME' microsite - Web Design (HTML/CSS)

Associated with University of Sydney — Aug 2023 - Oct 2023

- Created WELCOME TO ROME, a responsive microsite designed as an engaging guide to the city of Rome.
- Catered to first-time visitors and seasoned explorers by offering an immersive platform to explore Rome’s historical, cultural, and contemporary significance.
- Started with a mood board to define the website’s color scheme, inspired by Rome’s architectural elegance and cultural vibrancy.
- Designed mid-fidelity and high-fidelity prototypes using Figma to refine structure, aesthetics, and user flow.
- Implemented designs into a functional prototype using HTML and CSS in Visual Studio Code.
- Prioritized accessibility by referencing the Web Content Accessibility Guidelines (WCAG), optimizing color contrast and text readability for inclusivity.
- Achieved responsive design using CSS media queries, ensuring seamless usability on desktop and mobile devices.
- Structured the microsite into five core sections: Home, Geographical Wonders, Cultural Discovery, Community Significance, and Attractions and Events.
- Combined creative design and technical execution by leveraging Figma for design, mood boards for visual coherence, WCAG for accessibility, and responsive coding practices.
- Delivered a visually appealing and highly functional resource for exploring one of the world’s most captivating cities.

HTML **CSS** **Figma (Software)** **Web Content Accessibility Guidelines (WCAG)** **GitHub**

PURE BLISS - JavaScript (p5.js)

Associated with University of Sydney — May 2023 - Jun 2023

- Used p5.js, a JavaScript library, to create the project PURE BLISS.
- Designed the project to provoke feelings of growth and contentment with life through changing patterns and the randomness of colored lines expanding smoothly on the screen.
- Titled the project to reflect its core theme of focusing on the positive side of life.
- Drew inspiration from TRON: Legacy (Joseph Kosinski, 2010), specifically the use of lines to convey mood, adapting the concept to express growth and tranquility.
- Incorporated an interactive element where users can use the mouse wheel to change the direction of the colored line extending from the circle's center.
- Designed the interactivity as a metaphor for humans' ability to control emotions, influencing their journeys in life.
- Utilized perlin noise, randomization, and color mapping to create an experience of fluctuating optimistic emotions dependent on user input.
- Successfully illustrated the design concept by combining interactivity, visual expression, and generative art techniques.

p5.js **JavaScript**
